Assignment No.: 1

HELP University
university of achievers

Assignment Cover Sheet

Student Information (For group assignment, please state names of all members)		Grade/Marks
Name	ID	
Chan Zi Hao (Team Leader)	B2400169	
Kaung Myat Si Thu	B2401138	
Tan Yen Tze	B2501146	

Module/Subject Information		Office Acknowledgement
Module/Subject Code	BIT216	
Module/Subject Name	Software Engineering Principles	
Lecturer/Tutor/Facilitator	Seetha Letchumi	
Due Date	14th September 2026	
Assignment Title/Topic	HELP2U	
Intake (where applicable)	Semester 3, 2026	
Word Count		Date/Time

Declaration

- I/We have read and understood the Programme Handbook that explains on plagiarism, and I/we testify that, unless otherwise acknowledged, the work submitted herein is entirely my/our own.
- I/We declare that no part of this assignment has been written for me/us by any other person(s) except where such collaboration has been authorized by the lecturer concerned.
- I/We authorize the University to test any work submitted by me/us, using text comparison software,for instances of plagiarism. I/We understand this will involve the University or its contractors copying my/our work and storing it on a database to be used in future to test work submitted by others.

Note: 1) The attachment of this statement on any electronically submitted assignments will be deemedto have the same authority as a signed

statement.

2) The Group Leader signs the declaration on behalf of all members.

Signature: 	Date: 14/09/2026
E-mail: b2400169@helplive.edu.my	

Feedback/Comments*

Main Weaknesses
Suggestions for improvement

	Student acknowledge feedback/comments
Grader's signature	Student's signature:
Date:	Date:

Note:

1) A soft and hard copy of the assignment shall be submitted.
2) The signed copy of the assignment cover sheet shall be retained by the marker.
3) If the Turnitin report is required, students have to submit it with the assignment. However, departmentsmay allow students up to THREE (3) working days after submission of the assignment to submit the Turnitin report. The assignment shall only be marked upon the submission of the Turnitin report.

*Use additional sheets if required.

1.0 Overview

Currently, when HELP University students face a problem, they can only try to ask in huge WhatsApp group chats or walk into the faculty office. However, this takes a lot of courage, and often lecturers cannot help with issues outside of their field of studies. Thus, HELP2U aims to fill this gap by providing HELP University students a peer-to-peer support system by creating a digital centralised platform to enhance all students' overall university experience. Additionally, it aims to create a comfortable environment for new and existing students by allowing them to seek guidance from other student volunteers, creating a peer-to-peer support ecosystem while fostering each student's talent by allowing them to become volunteers and using their talent to help others.

The primary users of this platform will be HELP University students. Specifically, students can be requesters that seek help, and volunteers that offer to help others with their specific skillset. Furthermore, HELP2U is a platform intentionally designed to allow students to hold both roles at the same time. This project will be a new product which primarily focuses on allowing students to become volunteers or request for support from others.

The estimated cost for this project will be RM0 as we are developing using open-source tools available online such as Laravel, GitHub and VS Code. The development for this project is estimated to take up to 13 weeks, starting from the Week of 24th August 2026 till the Week of 16th November 2026. Thus, it will roughly take 130 hours per member of time cost assuming each member spends 10 hours per week on this project for 13 weeks.

2.0 Project Aims

This project aims to create a central, trustworthy platform for HELP University students to request and offer peer support. The system will handle the matching of students to suitable volunteers and retain all support history. Thus, students can focus on the actual help they need rather than navigating various unofficial channels to only get help from whoever replies first and not necessarily the best suited.

3.0 Project Objectives

Our objectives for this project are:

Objective 1 (Tan Yen Tze): To implement a secure authentication system that verifies student identity using two-factor authentication and allow students to manage their profile and become volunteers.

Objective 2 (Kaung Myat Si Thu): To be able to submit support requests and to be matched with the proper volunteers based on skills, availability and support mode efficiently, and to be able to track the status of the requests and to have an easier management of the volunteers' applications.

Objective 3 (Chan Zi Hao): To implement a session management module that allows student and volunteer to schedule or cancel sessions while allowing volunteers to mark session as completed while providing students a channel to give their feedback on the session.

All objectives must be met by 16 November 2026 or earlier before the 2nd presentation including passing all acceptance criteria defined in the user stories as well as all unit, functional and integration tests during development.

4.0 Project Scope

4.1. Deliverables

By 16 November 2026, our team will deliver:

1. Project proposal
2. Requirements specification and design document covering functional and non-functional requirements, user stories, and high-level design components such as architectural design, ERD, site map, database diagram, and wireframes.
3. A functional web application with all 3 use cases below implemented.
4. A GitHub repository with the complete source code and commit history of all team members.
5. Test documentation that includes all test cases derived from the defined acceptance criteria.
6. A live demonstration of the web application running in the defined demonstration platform in Section 6.2.

4.2. In Scope

HELP2U will be a responsive web application that can be accessed through a desktop or a mobile browser. It has 2 user types which are student and volunteer, and all registered students can also be a volunteer. This system consists of 3 functional areas.

(a) Manage Student & Volunteer Profile

- A student can register and login using their student ID, full name, university email address, and password with no duplicate accounts.
- The system will email a 6-digit verification code as 2-Factor Authentication (2FA) during registration to activate the account as well as for every login.
- A registered student can create and update their own profile.
- A student has the option to register as a volunteer after selecting one or multiple categories such as “Academic” or “New Student”, along with their specific skills, weekly availability, and their preferred support mode of virtual or face-to-face.

(b) Support Request & Volunteer Matching

- A support request can be selected by students based on the support category, along with description of assistance required, and specifying their preferred day, time and support mode.
- The system will return matching volunteers and their profiles, along with the options to filter them by skill, availability or support mode.
- The student can select their desired volunteer, and the request will be submitted.
- The volunteer will receive a notification, and they can either accept or reject the request.
- The student will be notified whether the volunteer accepted or rejected, and if the request is not responded within a certain period, the student can request for a different volunteer.

(c) Manage Support Sessions & Feedback

- Once a volunteer accepts a request, either the student or the volunteer can suggest a time for the session based on the volunteer's availability, if both parties agree, the system records it and displays the session schedule.
- Both the student and volunteer can cancel a scheduled session, and the system will update the status to "Cancelled" and notify the other person.
- After the session, volunteer can mark the session as "Completed", which will open up the feedback function for the student.
- Student submits a rating and an optional comment regarding the session, and the system will not allow feedback on sessions that are not completed yet.
- Both parties can view their own history of requests, sessions as well as feedback.

4.3. Out of Scope

The below are intentionally excluded from the current project scope to ensure the project can be completed within the 13-week timeline. The list below can be used as reference for future enhancements.

- Payment gateways such as Stripe or PayPal. HELP2U is a free service that holds no financial data of any kind.
- Video or audio conferencing directly integrated into the platform. Virtual sessions are only conducted using 3rd party software such as Microsoft Teams and is arranged between the students themselves.
- Native iOS or Android mobile application. Mobile access is available through the responsive web application only.
- Sensitive support services including mental health, medical, and legal concerns. Requests of the above are out of the platform's scope, and users are encouraged to reach out to the University's official student services.
- Admin facing modules such as a dashboard for university admins or faculty report analytics.
- Languages other than English.
- Integration with HELP University's student management systems. HELP2U is a standalone system as of now with its own user accounts verified against the university email domain.
- Automatic volunteer assignment. The students must manually go through the list of suitable volunteers and request for the volunteer of their choice by themselves.

5.0 Project Schedule

5.1 Work Breakdown Structure

Work Breakdown Structure

Our project development is split into 2 iterations. The first iteration focuses on getting the core APIs developed along with basic UI to interact with the API and database. The second iteration completes the project with 2-Factor authentication, volunteer matching logic, and feedback functionality along with the finalised UI for this project.

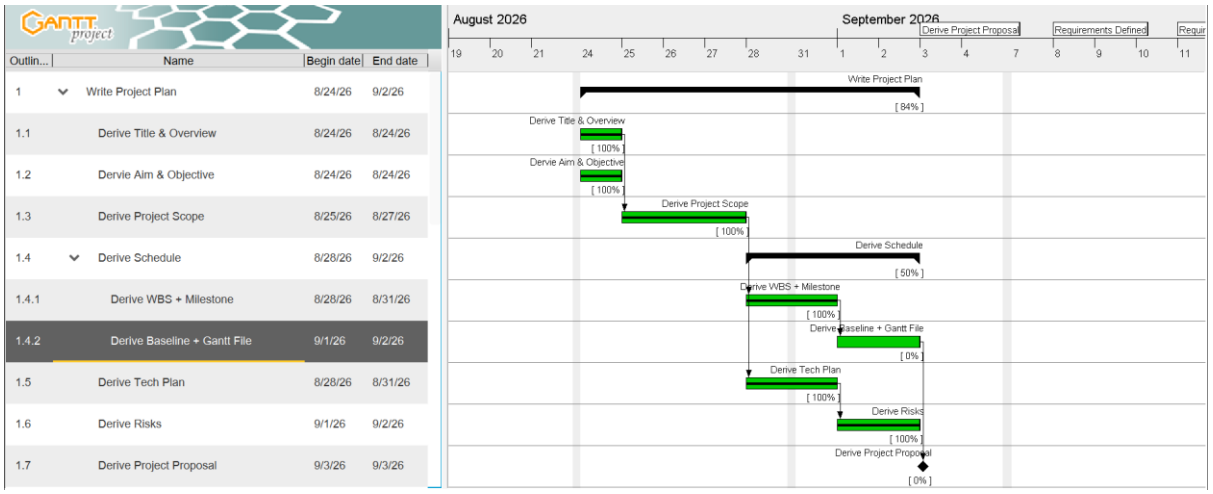

This project will be using the Iterative and Incremental methodology because in each iteration, we complete the cycle of building, testing, and delivering of our system. Iteration 1 of our system focuses on laying the foundation before iteration 2 completes the project with the rest of the functions.

Screenshot below is our HELP2U Work Breakdown Structure.

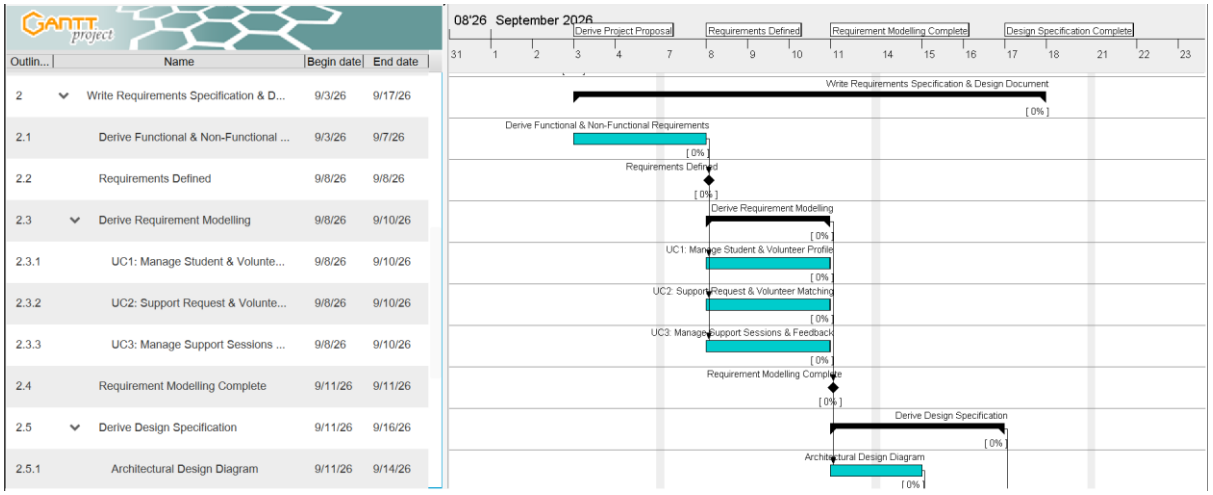

HELP2U Work Breakdown Structure				Team Members		
Task	Task Name	Duration(days)	Precedence	Chan Zi Hao	Tan Yen Tze	Kaung Myat Si Thu

6.0 Technical Description of System

6.1 Development Platform

Criteria	Tools/Hardware	Version	Description
Documentation	Microsoft Word	Microsoft® Word 2021 MSO (16.0.14326.20450) 64-bit	Microsoft Word was used for documentation because it is the industry standard for creating structured reports with document formatting features that improve organisation.
Modelling 1. Requirement 2. Design	1. Microsoft Word	Microsoft® Word 2021 MSO (16.0.14326.20450) 64-bit	Microsoft Word was used for requirement specification documentation because it is the industry standard for creating structured reports with document formatting features that improve organisation.
	2. draw.io	v31.3.1	Draw.io is a free tool that can create professional high-

			level design components such as entity relationship diagrams and hierarchy diagrams.
	3. Figma	v126.8.16	Figma is the most widely used web-based wireframe and prototyping tool among professionals.
Project Management	Microsoft Excel	Microsoft® Excel® 2021 MSO (16.0.14326.20450) 64-bit	Microsoft Excel was used for project management as it has built-in grid layouts which are suitable for creating Gantt charts and Work Breakdown Structures.
	GanttProject	Version 3.3	GanttProject is a software that can create visual Gantt Charts that are easily understandable by people.

Collaboration	Microsoft Teams	v26198.304.4946.9672	Microsoft Teams is our main communication medium as it is the most used communication software in corporation.
	GitHub	Version 3.22	GitHub is the most common service to host git repositories for multiple software engineers to work together in the same repository.
	Git	Version 2.47.1.windows.2	Git is the most reliable version control tool to track all versions and history of a codebase
Framework 1. Front End 2. Back End	1. Laravel Blade 2. Laravel PHP	v13.26.1	Laravel PHP is used as the development framework as it is capable of full stack development and PHP is a language that

			everyone in the team is familiar with.
Testing	Pest	v5.1.0	Pest is a modern testing framework that is capable of both unit testing and integration testing
Hardware	1. HP ZBook Firefly 14 G7 Mobile Workstation	Processor: Intel(R) Core(TM) i7-10810U CPU @ 1.10GHz Installed RAM: 32 GB Graphics card: • NVIDIA Quadro P520 (4 GB) • Intel(R) UHD Graphics (128MB) Storage: 1.82TB System type: 64-bit operating system, x64-based processor	
	2. Illegear Onyx V TGL	Processor: 11th Gen Intel(R) Core(TM) i5-11400H @ 2.70GHz (2.69 GHz) Installed RAM: 16 GB Graphics card: • NVIDIA GeForce GTX 1650 (4 GB) • Intel(R) UHD Graphics (128 MB) Storage: 943 GB System type: 64-bit operating system, x64-based processor	
	3. MSI Model14 C13M	Processor: 13th Gen Intel(R) Core(TM) i7-1355U (1.70 GHz) Installed RAM: 16 GB	

		Graphics Card: Intel(R) Iris(R) Xe Graphics (128 MB) Storage: 477 GB System type: 64-bit operating system, x64-based processor

Table 1: Development Platform

6.2 Demonstration Platform

Criteria	Tools/Hardware	Version	Description
Browser	Google Chrome	Version 151.0.7922.174 (Official Build) (64-bit)	Google Chrome is the most widely used browser for websites on both PCs and mobile phone.

Table 2: Demonstration Platform

7.0 Risk Management Plan

7.1 Technical Risk

Risk Name	HELP2U application development version mismatch
Description	All 3 team members work in the same repository but might work in different pace and modules. If the application version does not match, integration testing will be inaccurate and there is no single repository that is considered the most recent version of the application.
Probability (L/M/H)	M
Mitigation	Use strict version control tools such as Git and GitHub to ensure multiple developers working on the same repository is still able to track history and pull the most recent commits made by any other member before testing or writing new functions.

Table 3: Technical Risk 1

Risk Name	HELP2U 2FA Failure
Description	Two Factor Authentication relies on external services and API such as Twillio or Google OAuth which does not have a 100% guarantee uptime. If Twillio fails to send the 6-digit code to users, users will not be able to enter the application at all
Probability (L/M/H)	L
Mitigation	Consider implementing at least two 2 methods of 2FA such as emailing the 6-digit code or sending it through SMS. If both services do not go down together at the same time, which is highly unlikely, users will be able to securely enter our application using 2FA reliably.

Table 4: Technical Risk 2

7.2 Project Risk

Risk Name	HELP2U Project Scope Creep
Description	Our team could easily get too excited and start overengineering an architecture that is too complex for the timeline and objectives we want to achieve in our limited time.
Probability (L/M/H)	M
Mitigation	Doing a MoSCoW prioritisation practice and strictly focus on completing all the “Must Have” functions before developing for the nice to have features so that the application core functionality is prioritised in this tight schedule and if there is time, only then the team starts adding the extra nice to have features.

Table 5: Project Risk 1

Risk Name	Team Member Falling Ill Before Deadline
Description	If our project schedule is arranged so that we complete it just in time, if any member falls ill before the deadline, we will be unable to complete our project on time.
Probability (L/M/H)	M
Mitigation	Schedule our project to be completed a day or two before the deadline to account for unforeseen circumstances such as a team member falling ill. Additionally, ensure all members commit their work daily to make it easy for team members to step in and takeover when someone falls ill.

Table 6: Project Risk 2

7.3 Operational Risk

Risk Name	HELP2U User Adoption Imbalance
Description	Our application consists of 2 user types which are students needing help and students offering help. If 50 students request for help but there are only 5 volunteers, the supply will not be able to meet the demand and there will be students which is reaching out for help but is unable to receive any help or will have to wait for a very long time before help arrives.
Probability (L/M/H)	H
Mitigation	Develop a system that allows for grouped sessions for students in need of the same type of help so that a single volunteer can support more than 1 student at a time. Additionally, work on promoting the application to more seniors in the university that can be volunteers to balance out the supply and demand.

Table 7: Operational Risk 1

6. MARKING RUBRIC

Student 1 Chan Zi Hao
Student 2 Kaung Myat Si Thu
Student 3 Tan Yen Tze

CLO	Assessment Area	Marks	Poor	Satisfactory	Good	Excellent	Marks
CLO2	Appropriate level of scope coverage [17]						
	Title	1	Title is unclear or unrelated to the project or not found.	Title is generally relevant but lacks specificity.	Clear and relevant title.	Precise, concise and accurately represents the project.	
	Overview	4	Little/no overview; project context is unclear.	Basic overview provided but lacks sufficient context.	Clear overview with relevant project context.	Comprehensive, concise and clearly establishes the project context and purpose.	
	Project Aims	4	Aims are missing, vague or unrelated.	Relevant aims but broad or insufficiently focused.	Clear and relevant aims aligned with the project.	Precise aims clearly aligned with the intended project outcomes.	
	Project Objectives	4	Objectives are missing, vague or not measurable.	Relevant objectives but some are broad or unclear.	Clear, relevant and measurable objectives.	Specific, measurable and strongly aligned with the project aims.	
	Project Scope	4	Scope is missing, unclear or unrealistic.	Basic scope provided but boundaries are unclear.	Clear scope with appropriate	Comprehensive, realistic scope with clearly	

					inclusions and exclusions.	defined boundaries, inclusions and exclusions.	
CLO2	Project plan [16]						
	Work breakdown	5	Missing/incomplete ; tasks are poorly organised.	Major tasks identified but insufficiently decomposed.	Tasks logically decomposed into appropriate activities.	Comprehensive and logically structured WBS with well-defined work packages.	
	Milestones/Deliverables	5	Major milestones/deliverables are missing.	Some relevant milestones identified but sequencing/details are limited.	Relevant milestones and deliverables clearly identified and sequenced.	Comprehensive, measurable and logically sequenced milestones linked to project objectives.	
	Gantt chart - Timelines, Predecessors, Resource Usage, milestones	6	Missing or major errors in timelines/dependencies/resources.	Basic Gantt chart with some inconsistencies.	Clearly presents timelines, predecessors, resources and milestones.	Accurate and realistic Gantt chart with well-defined timelines, dependencies, resources and milestones.	
CLO2	Resource planning [6]						
	Development Hardware/Software	4	Required resources are missing or inappropriate.	Basic resources identified but limited justification.	Appropriate resources identified with reasonable justification.	Comprehensive and well-justified resources clearly matched	

						to project requirements.	
	Demo Environment Hardware/Software	2	Demo environment is missing or unsuitable.	Basic environment identified but lacks detail.	Appropriate demo environment clearly specified.	Clearly defined, feasible and well-justified demo environment.	
CLO2	Risk Management [5]						
	Risk Identification	3	Few/no relevant project risks identified.	Some relevant risks identified but coverage is limited.	Major project risks are appropriately identified.	Comprehensive identification of relevant technical, operational and project risks.	
	Risk Mitigation	2	No meaningful mitigation strategies provided.	Basic mitigation strategies provided.	Appropriate mitigation strategies provided for identified risks.	Practical, specific and well-prioritised mitigation and contingency strategies.	
CLO3	Documentation[10]						
	Format Consistency	6	Major inconsistencies in formatting and structure.	Generally acceptable but several inconsistencies.	Consistent formatting with minor issues.	Highly consistent and professionally formatted throughout.	
	Spelling/Grammar		Frequent errors affect readability.	Some errors but meaning remains clear.	Few errors; writing is generally clear.	Virtually error-free and	

						professionally written.	
	Professionalism		Poor presentation and inappropriate terminology.	Adequate presentation with some professional elements.	Professional presentation and appropriate terminology.	Highly polished, professional and suitable for formal academic documentation.	
	TOTAL	**50**				**SubTotal (/50)**	0
